CAREER OBJECTIVE

Computer Systems Engineering student with experience building full-stack web applications using FastAPI, React.js, Django, and MySQL. Passionate about backend development and software engineering, seeking a software development internship to contribute to real-world products while expanding my technical skills.

EDUCATION

Bachelor of Engineering (Computer Systems Engineering)
NED University of Engineering & Technology
2024 – 2028

CORE SKILLS

Languages: Python, Java, JavaScript, C, HTML/CSS

Frameworks: FastAPI, Django, React.js, Tkinter

Databases: MySQL, SQL

Concepts: REST APIs, OOP, DSA, Authentication, JSON, Database Design

Tools: Git, GitHub, Figma, Canva, MATLAB, Multisim

ACADEMIC PROJECTS

Ride-Sharing Platform (Full Stack) | FastAPI, React.js, MySQL

- Built a full-stack ride-sharing platform with a React.js frontend and a FastAPI backend, backed by a MySQL database.
- Designed role-based signup and login flow allowing users to register as either a Driver or a Rider, each with tailored profile details.
- Implemented real-time ride booking and tracking, connecting riders with available drivers dynamically.
- Developed dynamic fare calculation logic with peak-hour surge pricing based on demand.
- Integrated map services for live location tracking, route display, and pickup/drop-off selection.
- Developed RESTful APIs for authentication, ride requests, and fare calculation.

E-Commerce Platform (Full Stack) | Python, Django, JavaScript, HTML, CSS, MySQL

- Developed a full-featured e-commerce website with product listings, detailed product pages, and category browsing.
- Built a shopping cart system enabling users to add, update, and remove items with real-time order amount calculation.

- Implemented an admin panel for managing product listings, inventory, and order records.
- Designed order placement workflow, including cart-to-checkout flow and total amount computation.
- Used Django for backend logic and MySQL for persistent storage of products, users, and orders.

Python-Based Database Management System | Python, JSON

- Developed a file-based DBMS supporting record creation, deletion, updating, searching, and sorting.
- Implemented persistent storage using JSON file handling.
- Applied structured data management and basic database operation concepts.

Online Car Rental System | Python, JSON, GUI

- Designed a rental management system with separate Admin and User account authentication using passcodes.
- Implemented car availability tracking, hourly rental calculation, and rental history storage.
- Developed the system using Object-Oriented Programming principles and JSON-based persistent data storage.
- Integrated feedback functionality upon vehicle return.

File Compression System | Python, DSA

- Implemented Run-Length Encoding (RLE) and Huffman Coding compression algorithms.
- Used tree structures and frequency mapping for efficient data encoding and compression.

Daily Task Reminder | C Programming

- Developed a console-based task reminder application.
- Implemented structured programming and file handling for saving and retrieving tasks.

ADDITIONAL SKILLS

- Problem Solving
- Analytical Thinking
- Team Collaboration
- Communication
- Quick Learner
